

Category: Recommended

CarnaudMetalbox Engineering (CMBE) Ltd. have developed a Rear Airbag Quick Charge upgrade kit for use on all of our Bodymaker Series machines with or without Rear Airbag Monitoring.

The Rear Airbag Quick Charge Upgrade Kit is provided fully assembled and ready to fit to the Bodymaker, taking approximately 5 minutes to install.

The upgrade kit significantly decreases the time taken to recharge the Rear Airbags after machine stop from 45-60 seconds (using standard configuration) to 15-20 seconds. This reduces machine down time and allows for increased productivity (Fig. 1).

In addition to the above, CMBE Ltd. also recommend that customers with Non-Rear Airbag Monitoring purchase the Air-feed for Quick Exhaust Option kit, optimising the Rear Airbag Quick Charge upgrade kit for greater efficiency.
